Reprod. 50:927-934(1994).
-!- FUNCTION: Binds to cocyte zona pellucida in vivo. May play a rollin the fertilization process and/or early embryonic development.
-!- SUBCELLULAR LOCATION: Sortetory granules.
-!- TISSUB SPRCIFICITY: Oviduct.
-!- SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Malette Garlilatation of hamster oviductin as a sulphated rong process and/or early embryonic development.
Might act as a protective secretion influencing the first steps of the reproductive process necessary for the normal triggering of the reproductive process necessary for the normal triggering of the reproductive and early embryonic development.

C.:- SUBCLINIAR LOCATION: Secretory granules.
C.:- TISSUE SPECIFICITY: Oviduat.
C.:- PITM: HIGHLY O-GLYCOSYLATED AND ALSO N-GLYCOSYLATED.
C.:- SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        73 WEKRGYERFINNLRLKNPELTTMISLGGWYEGSEKYSDMAANPTYRQOFIQSVLDFLOEYK 132

"Cloning of a recombinant complementary DNA to a baboon (Papio amubis) estradiol-dependent oviduct-specific glycoprotein.";

Mol. Endocrinol. 5:356-364(1931).

-!- FUNCTICN: Binds to occyte zona pellucida in vivo. May play a role in the fertilization process and/or early embryonic development.

-!- SUBCELLULAR LOCATION: Secretory granules.

-!- SUBCELLULAR LOCATION: Secretory granules.

-!- DEVSLOPMENTAL STAGE: At the time of ovulation.

-!- DEVSLOPMENTAL STAGE: At the time of ovulation.

-!- SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DIQD-----EXILYPEPNKLKERNRELKTLLSIGGWNFGTSRFTTWLSTFANREKFIAS

A.Title: Complete genome sequence of the alkaliphilic bacterium Bacillus halodurans and § A; Racession: D83764

A,Accession: D83764

A,Scatus: preliminary

A,Molecule type: DNA

A,Residues: 1-599 <STO>
A,Cross-references: GB:AP001510; GB:BA000004; NID:g10173440; PIDN:BAB04635.1; GSPDB:GN001

A,Experimental source: strain C-125

Sequence 35, Application US/0929225

Patent No. 645566

GENERAL INPORMATION:
APPLICANT: McCall, Catherine A.
APPLICANT: Meber, Eric R.
TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS
TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS
TITLE OF INVENTION: NUMBER: US/09/292, 225
CURRENT APPLICATION NUMBER: 60/098, 909
EARLIER APPLICATION NUMBER: 60/098, 909
EARLIER FILING DATE: 1998-09-02
EARLIER FILING DATE: 1998-06-13
EARLIER FILING DATE: 1998-04-17
NUMBER OF SEQ ID NOS: 49

SOFTWARE PATENTING DATE: 1998-04-17

Sequence 41, Application US/0929225

Patent No. 645566

GENERAL INFORMATION:

APPLICANT: McCall, Catherine A.

APPLICANT: Hunter, Shirley Wu

APPLICANT: Weber, Eric R.

TITLE OF INVENTION: NOVEL DERNATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS

TITLE OF INVENTION: NOVEL DERNATOPHAGOIDES NUCLEIC ACID MOLECULES,

FILE REFERENCE: AL-2-C3

CURRENT APPLICATION NUMBER: US/09/292,225

CURRENT APPLICATION NUMBER: US/099,209

EARLIER APPLICATION NUMBER: 60/098,909

EARLIER FILING DATE: 1998-09-13

EARLIER FILING DATE: 1998-05-13

EARLIER FILING DATE: 1998-04-17

EARLIER FILING DATE: 1998-04-17

EARLIER FILING DATE: 1998-04-17

EARLIER FILING DATE: 1998-04-17

SEARLIER FILING DATE: 1998-04-17

NUMBER OF SEQ ID NOS: 49

Patent No. 6060590

GENERAL INFORMATION:

APPLICANT: Bryant, Peter J.

APPLICANT: RAWAWHER, KARUNO

TITLE OF INVENTION: CHITINASE RELATED PROTEINS AND METHODS

TITLE OF INVENTION: OF USE

FILE REFERENCE: 07306/15501

CURRENT APPLICATION NUMBER: US/09/052,778A

CURRENT FILING DATE: 1998-03-31

NUMBER OF SEQ ID NOS: 16

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 16

LENGTH: 554
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels
